

Weed of the Week

Help the City of St. Albert control invasive plants/weeds in our community!

An invasive plant is a non-native plant that spreads easily, aggressively and may displace or alter natural plant communities.

As per the Alberta Weed Control Act, municipalities are required to control the spread of noxious weeds.

COMMON TANSY

Locations:

Often found in areas that receive direct sunlight.

Identification:

Flowers are yellow, clustering at the top of the stem. The plants grow up to 1.5 metres tall and have many stems.

City Control:

The City plans to control small patches through repeated manual removal.

What can you do?

If you spot a common tansy, manually removing the weed from the area is the best method of control.
